Levels of Cohesion

1. Coincidental - no meaningful relationship among elements
   - modularizing existing code
   - save duplication

2. Logical - some logical relationship similar function

3. Temporal - logical except related in time

4. Communicational - related by a reference to the same data
   - read and print file

5. Sequential - transformation of data

6. Functional - all elements are related to the performance of a single function
